

Plan service. Run operations. Keep riders moving.

Plan routes, build schedules, and run live **demand response** and **fixed-route** operations—all in one platform.

BY THE NUMBERS

400+

Transit services running on Spare

25 million+

Rides powered annually

200+

Trusted transit and technology partners

One platform for your entire fixed route operation

From routes and timetables to vehicles, drivers, and live service changes, Spare replaces fragmented systems with one unified workspace.

Visual route planning

Draw routes, place stops, and build timetables on an interactive map.

Integrated scheduling tools

Generate optimized schedules based on labor rules and service needs.

Real-time service management

Track vehicles, monitor on-time performance, and manage detours as they happen.

Mobile driver app

Provide turn-by-turn navigation, service alerts, and passenger counting in one app.

GTFS management

Create, update, and export clean GTFS directly from operational data.

Unified driver and vehicle management

Assign resources across fixed route and demand-response services in one system.

From fragmented systems to one operational platform

Most agencies rely on separate tools for planning, scheduling, live operations and GTFS. That fragmentation slows change, creates data gaps, and forces dispatchers to switch systems all day.

With Spare, agencies can:

- ✓ Make same-day service changes with confidence
- ✓ Reduce errors caused by disconnected GTFS updates
- ✓ Support shared dispatchers and drivers across services

With Spare, agencies see measurable gains

Stronger on-time performance

Respond to issues as they happen with live vehicle tracking, status indicators, and faster detours.

Faster, more reliable scheduling

Replace spreadsheets with automated, rule-compliant schedules that improve fleet and driver utilization.

Lower admin burden

Unified platform automates updates and integrations (GPS, passenger data), cutting silos between fixed route, paratransit, and microtransit.

Smoother driver adoption

One intuitive driver app across fixed route, microtransit, and paratransit—making training easier for shared drivers.

More visibility & reporting

Clean GTFS export + cross-mode analytics provide fleet-wide performance visibility and multimodal coordination.

Why agencies choose Spare

Dedicated partner team

Work with a team that understands public transit and tailors setup, training, and rollout.

AI-native insights

Improve routing, scheduling, and performance with predictive analytics over time.

Unified operations

Plan, schedule, dispatch, and monitor service in one connected platform.

Fleet-wide visibility

Track vehicle location, passenger loads, and on-time status from the office to the road.
