100%

Message history recorded

Everything dispatch needs to manage in one place

From voice messages to emergency alerts, Spare Push To Talk replaces scattered phone calls with one unified, recorded communication hub.

Push-to-talk voice

Send voice messages with one tap. No phone calls, no hold times, no personal numbers.

Two-way messaging

Exchange text messages between dispatch and drivers in real time.

Emergency alerts

Trigger safety alerts with countdown confirmation for urgent situations.

Quick reply templates

Respond instantly with pre-built messages like "On my way!" or "Running late."

Unified conversation queue

View all driver messages in one place, filtered by fleet, with new and reviewed status.

Broadcast messaging

Send announcements to all drivers or specific fleets at once.

From scattered phone calls to one unified channel

Most agencies rely on personal phones, two-way radios, and fragmented tools to reach drivers. That means missed messages, delayed responses, and no record of communication.

With Spare, agencies can:

- ✓ Reach any driver instantly
- ✓ Complete record of all dispatch-driver communication
- ✓ Handle emergencies faster with one-tap alerts
